PROJECT OVERVIEW

As part of the ongoing effort to reduce extraneous groundwater and surface water from entering the sanitary sewer system and to improve the existing infrastructure, GNHWPCA will be investigating and rehabilitating existing pipes and manholes in Hamden and East Haven. The rehabilitation will be done using trenchless technologies to minimize impacts on the neighborhoods and traveling public.

BENEFITS

➢ The Project is estimated to reduce water leaking into the sewers by over 400,000 gallons per day and will extend the useful life of the infrastructure by approximately 50 years at minimal cost.

IMPACTS

➢ Daytime construction is anticipated with lane reductions and occasional roadway closures.
➢ Advance notices will be provided to customers whose sewer service may be affected.
➢ Signs will be installed and traffic will be guided by police and/or flagman per Local/State requirements.

TIMING AND COORDINATION

Construction Start: Spring 2021
Duration: Construction is expected to continue through 2022.
Schedule: Mon-Fri from 7 AM to 6 PM. There may be limited Weekend or Night Work depending on final permitting requirements.

*Due to dynamics of construction schedule, weather and other factors, dates and times are subject to change.
